DETAILED ACTION

Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance: Regarding claims 1 and 7, the prior art of art, Lee (US 2004/0137944) teaches a mobile communication device 102 (Figs. 1 and 5) capable of two-way radio communication having teletypewriter communication capability (Sections 0017, 0019-0020, 00222, 0025, and 0027-0028), the mobile communication device comprising a microprocessor 512 (Fig. 5) within the mobile communication device capable of converting between alphanumeric data and TTY formatted data (Section 0028, "Controller 512 executes the necessary TTY capture 526 and TTY mapping 528 routines"); memory 524, 536, 522, or 518 (Fig. 5) associated with the microprocessor 512 (Fig. 5); mobile user interface in communication with the microprocessor 106, 104, or 108 (Fig. 5); and conversion information stored in the memory for conversion between alphanumeric data and TTY formatted data (Sections 0022 and 0028).

Harris (US 2004/0127233) teaches a teletypewriter tone detector circuitry 224 (Fig. 2, Section 0074) for detecting TTY tone formatted data received by the mobile communication device (Fig. 2), the TTY tone detector in communication with the microprocessor 204 (Fig. 2).

The prior art of record fails to teach a mobile communication device capable of two-way radio communication having teletypewriter (TTY) communication capability, said mobile communication device comprising a microprocessor within the mobile communication device capable of converting between alphanumeric data and TTY

formatted data; memory associated with said microprocessor; mobile user interface in communication with said microprocessor; conversion information stored in said memory for conversion between alphanumeric data and TTY formatted data; and a teletypewriter (TTY) tone detector circuitry for detecting TTY tone formatted data received by the mobile communication device, the TTY detector in communication with said microprocessor.

Even though the combination of Lee in view of Harris teaches the limitations, the examiner agrees with applicant's remarks filed on 10/10/2008 and 2/25/2009 that Lee teaches in sections 0005, 0007, and 0029 that a tone detector is a problem in the art and Lee's method wouldn't use a tone detector. Therefore, Lee teaches clearly away from using a tone detector and the examiner does not think it would be ordinary for one skilled in the art to make the combination.

The prior art of record fails to teach the claimed subject matter as claimed and substantially connected in claims 1-5 and 7-10 and 12-13.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. McLaughlin discloses a network communication system. Hyziak discloses a system and method for transmitting and receiving text data via a

communication device. Hepworth discloses a method for reconstructing missing packets in TTY over voice over IP transmission. Shkolnikov discloses an active keyboard system for handheld devices. Rogers discloses a system and method for character case control in a wireless communication device. Bernhart discloses a TD-SMS messaging gateway. Bravin discloses a multi modal communications system. Proctor discloses a facility and method for cellular data communication between hearing impaired users and emergency service centers. Nielson discloses a portable telephone communication device for the hearing impaired.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to ANDREW WENDELL whose telephone number is (571)272-0557. The examiner can normally be reached on 7:30-5 M-F.
